### Product Description

#### Tornos Metal VTL Single Double Column Machining Tools Vertical Turning Lathe

The CNC vertical lathe is of excellent performance, a wide range of technology, high productivity.

Based on referring to the advanced machine design and manufacturing technology, adopting the newest design philosophy, and combining the profound corporate culture, our company has developed a kind of delicate machine tools with animatronics and hydraulics integration, and provided the world-class products for overseas and domestic customers.

To make the lathe with high turning precision and enough rigidity and intensity, the table adopts integral casting and thermal symmetric structure, the main shaft bearing is the high-precision double row cylindrical roller bearing, and the table guideway.

The CNC Vertical lathe is a big machine used for handling large and heavy workpieces with a wide radial size and relatively smaller axial size. It's designed to process workpieces with complex shapes, such as cylindrical surfaces, end surfaces, conical surfaces, cylindrical holes, conical holes, and more. Additionally, with the help of additional tools, it can also perform operations like thread cutting, turning spherical surfaces, imitation machining, and grinding. Unlike horizontal lathes where workpieces are clamped horizontally, the vertical lathe has its main spindle axis arranged vertically, and the worktable is positioned horizontally. This arrangement makes it more convenient for clamping and aligning workpieces. Furthermore, this setup reduces the load on the spindle and bearings, enabling the vertical lathe to maintain its accuracy over long periods of operation.
