Product Description

Gantry Cnc Products Brass Machining Lathe Turning Brass Pool Cue Lathe Machine

The CNC vertical lathe, also known as a vertical turning center, is a machine tool used for turning and cutting metal components with high precision and efficiency.

Single column vertical lathe, configuration of advanced and reliable mechanical and electrical components, structure performance is outstanding, strong rigidity, machine tool can meet the strong cutting, worktable can carry large tonnage load, good stability, high efficiency, safe and reliable.

Vertical lathe belongs to large mechanical equipment, which is used to process large and heavy work pieces with large radial size, relatively small axial size and complex shape. Such as cylindrical surface, end face, conical surface, cylindrical hole, conical hole, etc.

Additionally, CNC vertical lathes are highly automated and can be programmed to perform a wide range of machining operations, such as turning, drilling, boring, threading, and milling, with minimal human intervention.

Overall, The CNC vertical lathes are a versatile and efficient machining tool that offer high precision and automation capabilities, and that is why makes them an essential component of modern manufacturing processes.

Key Features:

The table utilizes a high precision thrust ball rolling guideway and a slide guideway with a diameter of 1.6 meters.

The column cross rail is made of high-strength and highly wear-resistant Grey cast iron.

The guideway pairs in both the horizontal and vertical directions are made of wear-resistant Grey cast iron.

The rail guideway surface of the ram and side head undergo middle frequency hardening and rolling grind finish machining.

The bottom station features a new type of black chromium plane.

The rail head is equipped with a lead screw for horizontal and vertical transmission.

The pentagonal turret pinion plate ensures high strength and rigidity in index positioning.

Cross lubrication is provided with oil through a hand pump.
