## Product Description

### Large Spindle Bore Heavy Duty Lathe Torno Gear Head Horizontal Lathe Machine

#### Product Introduction:

The conventional heavy-duty horizontal lathe, it suitable for high speed steel hard alloy cutting tool, various materials shaft parts, cylindrical and disk-shaped parts processing. To achieve turning cylindrical, face grooving, cutting slot, cutting off, boring and turning inside and outside the cone and other processes.

The Horizontal lathe machine is mainly suitable for cutting the workpiece inside and outside round cylindrical, cone and other rotating parts, machinable various commonly used metric, inch, module and diametral pitch thread, and broaching oil groove and keyway.

#### Key Features:

- 1.High rigidity overall bed with 755mm bed span, which ensures the machine has strong stability and high precision, and bed loading capacity to 16000kg.
- 2.Spindle standard through the hole for the 130mm large hole, and adopt A2-15 spindle nose connection type, runout accuracy of spindle is better.
- 3.The machine tool can be used to cut the short conical surface of the motor by the top tool post, and the long conical surface can be turned by the top tool post and the longitudinal feed.
- 4.High power, high rigidity and wide speed range for high speed and powerful cutting, speed range of 3.15-315rpm with 33 speeds.
- 5.According to machining need, customers can choose electric moving tailstock, reduce operator labor intensity and improve work efficiency.
