Double-Column Turret Vertical Lathe Machine Directly Supply Cast Iron Metal VTL

Product description

The vertical lathe finds application across mechanical processing sectors, adept at handling tasks such as internal and external cylinder machining, conical surface work, face cutting, and more.

This versatile machine series caters to a broad spectrum of industrial part fabrications. It facilitates operations like cylindrical turning, boring, tapering, facing, and grooving, accommodating both roughing and finishing stages seamlessly.

It is compatible with high-speed steel and carbide cutting tools, making it ideal for processing non-ferrous metal components in various industries. This includes operations on cylindrical surfaces, conical faces, end planes, and grooving tasks, catering to both rough and fine finishing requirements.
