Product Description

Siemens Horizontal Boring Machine Large Size Turret Milling Machines Fresadora For Metal

BASIC LARGE PARTS: the bed, column, slide seat and other basic large parts are made of high-quality cast iron parts, the machine tool ram large parts are ductile cast iron parts with high mechanical load characteristics, the use of FEM finite element analysis has extremely high rigidity. The column is a large section of double wall design, both vertical and vertical are covered with reinforcing bars, with sufficient bending and torsional strength.

Spindle box: The machine adopts ram headstock mobile structure, and the headstock adopts integral inclusion structure, which contains the ram in the box, improves the overall rigidity of the ram structure, and is conducive to the machine tool for strong cutting.

MACHINE GUIDE RAIL: The movement of X axis adopts **static guide rail**, which has high static stiffness, improves the rigidity of the guide rail and extends the service life of the guide rail. **The moving guide surface is inlaid with zinc base alloy plate**, which can protect the guide rail of the machine tool.

CNC ROTARY TABLE: CNC rotary table has the characteristics of compact structure, reasonable layout, high precision, large load and so on. It can be used with floor milling and boring machine to expand the processing range of the main machine.

The CNC planer type boring mills are machines with large torque, high efficiency, high rigidity and advanced technologies. The machine can meet the demands of each user, including different controllers, different precision requirements, different sizes of tables by forming different models of boring machines. This series of boring mills are suitable for machining large medium sized box shaped, frame structure or moulding parts, also can perform milling, boring, drilling, winching, tapping etc after one clamping. The machine controls 7 axes with 4 axes simultaneous and allows circular interpolation and 3-D curved surface machining. Equipped with milling head, face plates and other devices, the series of machines have enlarged machining capabilities. The spindle has cooling case to limit the head in the spindle.
